

Freescale Semiconductor is a global leader in the design and manufacture of embedded semiconductors for the automotive, consumer, industrial and networking markets. Our products are all around us, you touch them every day.

Our Business is growing! For our Technical Center of Excellence for Battery Management in Munich we hire

Systems Solution Engineers (f/m)

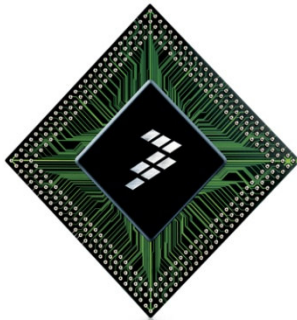

Systems Architect/Product Definer (f/m)

In this role you Identify market demands of the electric powertrain segment by working with Marketing, Sales and Field teams to understand technical trends and customer requirements

Subsequently you align all Freescale product divisions and resources to define and create attractive future system solutions for our global customers based on Freescale's strengths, technologies and roadmaps.

You will develop innovative system solutions which reduce system cost or provide breakthrough functionality and do technical feasibility studies

Based on a well developed network on working- as well as on management levels in those functions you will act highly motivated, self driven and independently to drive a successful battery management strategy across all Freescale divisions. For Freescale you act as spokes person in industry events and conferences

We are looking for someone with a solid track record in the automotive industry. You have knowledge in analog functionality like power supply, pre-drivers and sensor interfaces. Application knowledge on electric drives and battery management systems is appreciated. In addition you have a positive attitude and energy. You are a true team player. You want to interact with colleagues and customers on a global basis and have excellent communication skills
